

Youth Net

CUHK: Jason, Sam, Kiki, Ken; Edu: Yuki

A website that gathers power and ideas of the youth

Project Introduction

We're in a most connected world, but also a separated world, people lack actual communication, so we create this platform to bring youth together. The user not only can join the events provided by others, but also create their own event, the platform is non-profit, while we require identity check to ensure participants safety.

Limitation and difficulties

Since WordPress is used to create the website, some additional functions provided by plugins in WordPress have to be paid. Also, we have to handle some conflicts between some plugins in Wordpress. Moreover, the database and the style of the website are not easily to control. Therefore, the final website is not exactly the same as the original design, due to the technical limitation.

Design Rationale

The platform is largely based on wordpress, which is a user-friendly platform, personal information are kept in confidential to secure privacy.

Individual Reflections

Kiki

This is my first time to handle a project so thoroughly. Our cooperative partner gave us the freedom to create a website that can empower and gather the younger generation. It is an amazing experience to see how our idea in mind has transformed into a real thing that works. During the project, we have met a number of technical difficulties and it was hard for us to squeeze time from our hectic school life. Fortunately, we are a strong team that everyone has tried our best to deliver the outcome.

Ken

After joining this project, I learned about the underly structure of a website, and learned how to communicate with teammates to build a project, which is a worthless experience

Sam

It has been such a valuable experience for my first university competition! I meet friends from different backgrounds, different schools. I never imagine that i can build a website in my life. We can easily build our website by clicking the buttons, adding the plugin in wordpress. Despite using wordpress is much easier than coding, we need to spend a lot of time to get familiar with it, and there are plenty of plugin conflicts.

Jason

This project allows us to learn how to do a project. Doing this project was not just creating a website directly, we had to organize different ideas and design the look and the functions of the website. Although we didn't have any web development experience, we've successfully finished our website. To sum up, this is an excellent experience for us.

Yuki

This project provides many opportunities for me to learn how to create a website. Creating a website requires the cooperation, organisation and action. Our group are coming from different universities, so we cannot have meeting regularly, but luckily, all of us are eager on doing this project and giving suggestions to one another when we face several failures. Even though we have no much knowledge on building a complete website, we pay much effort on groping the way to finish our project.

Conclusion and Recommendations

Conclusion:

Gathering groups of people with shared interests or aims

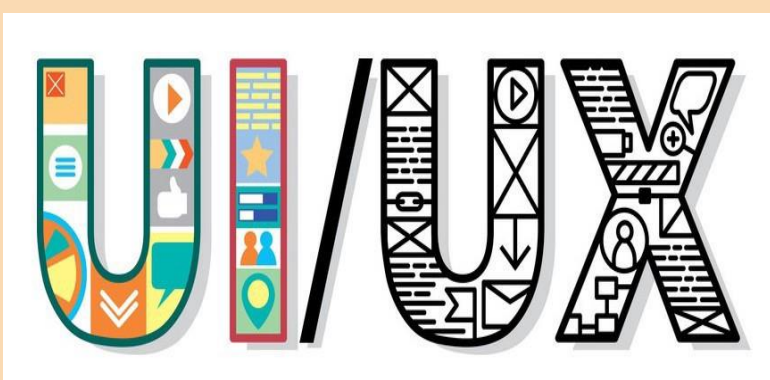

Good Security and Privacy

Mental Health Support

Recommendation:

Better user interface

Detail of the website
(URL/Logo/Website Name)

Advanced mental health support
